

**Your reliable partner
for an optimal indoor climate**

An NHS air curtain:

The inviting climate solution

How do you create a warm welcome for customers and visitors?
With an open door and without leaving your employees out in the cold!
An air curtain produces a warm airflow in winter and a refreshing
or even cooled airflow in summer.

A suitable air curtain for every doorway

Whatever the door or situation, you will always find the right air curtain at NHS. Choose from a wide range of standard air curtains - often available directly from stock - or let us tailor one to your needs.

Low maintenance

Did you know that an NHS air curtain barely needs any maintenance? On average, maintenance is required only once or twice a year. All our products also come with a five-year warranty.

Healthy, comfortable and energy-saving

- Minimum energy loss and consumption
- 70% to 80% energy savings compared to an open door
- Optimum thermal comfort for a pleasant climate for shopping or other purposes
- Improved air quality for visitors and employees
- Draught protection for a healthier environment and less sickness absence
- Reduced circulation of dust, moisture and smells, and fewer insects inside the building
- Warm, refreshing or cooling airflow

Rondo

About NHS Air Curtains

Chances are that you have already encountered - consciously or unconsciously - NHS's climate solutions. You will find them in many shopping streets in the Netherlands, Belgium, Austria and Germany. Our air curtains provide many retail chains with an inviting entrance and a comfortable indoor climate. But you will also come across NHS air curtains in public buildings, factory halls and many other places where people constantly walk in and out.

About us

NHS dates back to 2011. In our Dutch family firm, craftsmanship and innovation go hand in hand. Our many years of experience in air, flow and control technology and the extensive facilities at our own production location ensure that with us your indoor climate problem is always in good hands.

Production on Dutch soil

When you buy an air curtain, only the best possible quality will do. You can always count on NHS for that. That fact that we produce the air curtains ourselves in the Netherlands means we have full control of the process. Another great thing about having our own production facility is that the lines of communication are very short. Your dedicated contact person is virtually always available.

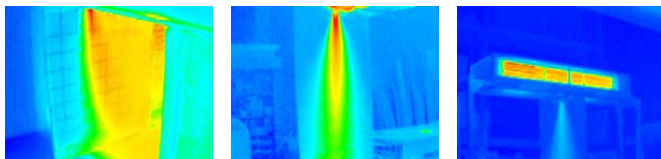

Industrium

State-of-the-art products

To provide you with the very best and most energy-saving products at all times we invest heavily in research and further development. We work together with a German college to analyse the operation of our air curtains on location with equipment including a thermal imaging camera. And we use computational fluid dynamics to analyse how we can further improve air flows. We also collect customer experiences as a basis for further optimising our products.

Ever more innovative, ever more sustainable

You can always rely on our air curtain meeting the latest standards and being developed according to the latest insights. To keep itself informed, NHS is a member of the Dutch Association of Suppliers of Air Technical Equipment and of Eurovent, the sector association for indoor climate, process cooling and technologies for the food chain. Together with other manufacturers, suppliers and research institutes, we are committed to making air curtains increasingly innovative and sustainable.

Discover the advantage of an air curtain for your sector

Retail & Business

An open door is an inviting entrance for customers and visitors and retailers know this better than anyone. However, an open door also lets in dust, moisture, smells, wind and insects, and you end up with an unnecessarily high energy bill on the door mat. You can solve this problem easily by installing an NHS air curtain.

Industry

There are many transport movements in industrial buildings, which means doors are often left open all day. This causes you to lose valuable energy while your employees suffer from cold or draughts. With an NHS air curtain you create a pleasant indoor climate, which reduces absenteeism and saves energy.

Cold stores

Our range includes a complete series of industrial air curtains for cold stores to maintain a constant temperature and humidity and to save energy. The units prevent ice accumulation and create an unobstructed view in the passageway. That greatly improves safety, too.
